Project Statement

- IPL Fantasy League System is a web based application for bidding.
- This application will have admin and bidder.
- Both users have their own set of privileges to use the application.
- This system should allow new users to register themselves and use all the authorized functionalities.

Project Statement (Bidder)

- A bidder can sign in with the help of username and password.
- Bidders can view the match schedules and bid on a team for a match before the start of the match. When the bidder bids on a team he/she would be able to change/cancel his/her team before the match starts.
- The application shows the match details which includes the playing team, the venue of the match and current standing of the teams on the points table.

Project Statement (Admin)

- Admin is responsible for scheduling and rescheduling of matches, updating team statistics.
- Application should also provide facility to admin for managing the tournament.
- When bidders bid on a match, the admin should be able to view all the bidders bidding on a particular team and the percentage of users supporting a team.
- When the match results are announced, the system should update the standings in the team points table and bidder leaderboard.

Technology Details

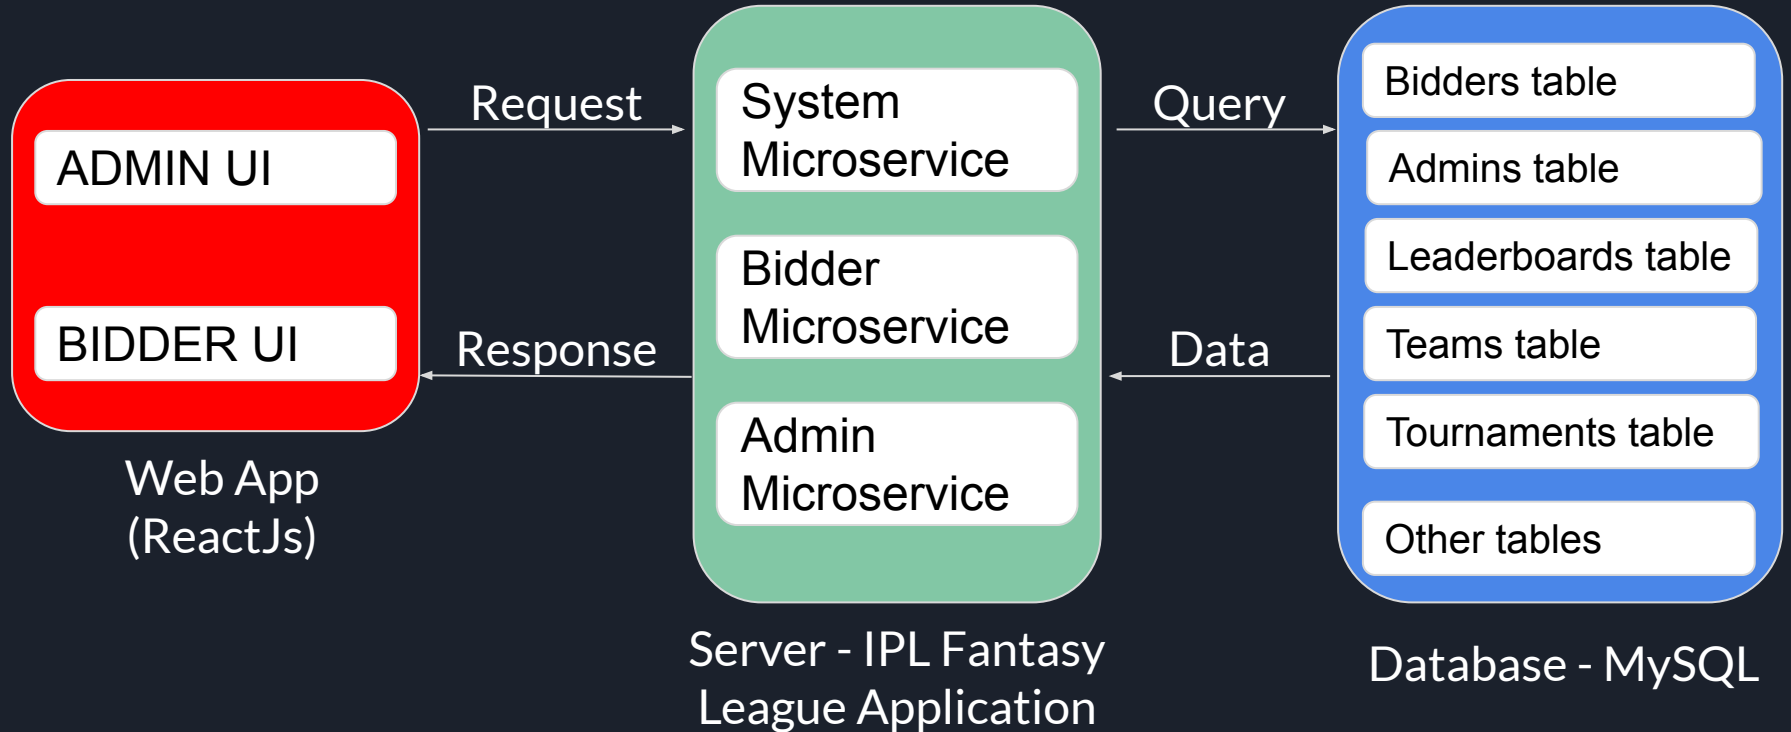

- Build Tool: *Apache Maven*
- JDK: *11*
- Spring Framework – *Spring Boot*
- Routing and discovery: *Feign, Eureka*
- Client-side load balancing: *Ribbon*
- Logging: *Slf4j with Log4j*
- Security: *BCrypt password hashing*
- DB: *MySQL*
- IDE: *Spring Tool Suite*
- Data Layer: *Spring Data JPA*

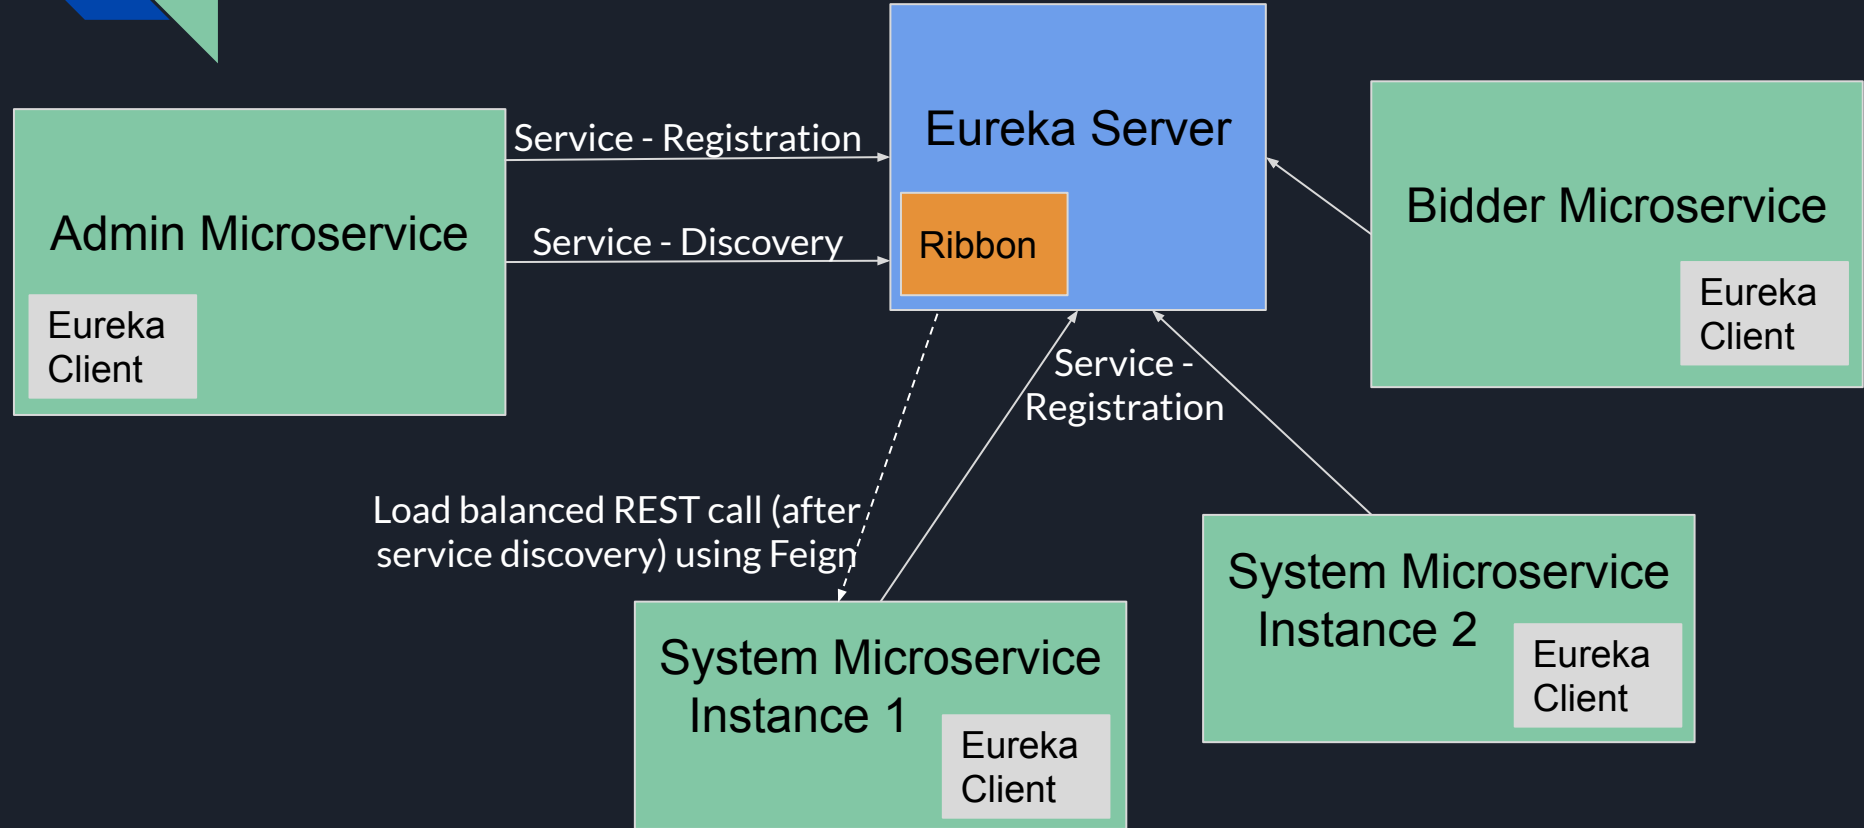

Technology Details - Sprint 2

- Authentication and Authorization: *Spring Starter Security*
- JWT Parser: *JJWT*
- Mail: *Spring Mail*
- Unit Testing: *JUnit 5 & Mockito*
- Static Code Analysis: *SonarQube*
- Automation Testing: *Selenium*
- UI: *ReactJs ,Bootstrap, Material UI*
- Cloud deployment: *AWS EC2 instances, Amazon RDS*

Data flow

Microservices pattern

Special Highlights and Suggestions

- Code Review
- Collaborative work on Github
- Deletion of a Record

Code Testing

- Selenium Testing using TestNG
- Static Code Analysis using SonarQube

Previous Progress

[API documentation](https://bit.ly/ipl-fl) - bit.ly/ipl-fl

Features implemented during this sprint

- Authentication using Spring Security and saving state (in JWT) using cookies on the client-side
- Adding UI using ReactJS
- Front-end validations for the data
- Testing and analysis
- Cloud deployment
